

TTmex

Distributed Test Platform

With TTmex you are able to manage, execute and analyze TTCN-3 test scenarios, running scalability and load tests in various distributed environments.

TTmex is a standard compliant implementation of the Test Control Interfaces presented in Part 6 „TTCN-3 Control Interfaces“ of the TTCN-3 standard. Tests executed using the TTmex platform are scalable, transactional, and independent from the underlying execution platform. They can be distributed over many test hosts, and different test behaviors can be executed simultaneously.

Features & Highlights

- Automatic distribution of test components
- Integrated deployment of test software
- Specification of distribution algorithms
- Integration of heterogeneous test equipment
- Test setups as test enabled networks
- Scripting for batch mode tests
