

TTplugin FTP

File Transfer Protocol

The File Transfer Protocol is a commonly used protocol for exchanging files over a TCP/IP based network, independent from the operating system. TTplugin FTP is a port plugin acting as an FTP client enabling TTworkbench users to communicate with the system under test. Users can concentrate on writing test cases with full test access to the system under test via FTP.

Features & Highlights

- Multiple test components and multiple-port mapping
- Freely combinable with additional test access (TTplugins)

TTplugin SCP

Secured Copy Protocol

The SCP port plugin provides the possibility to execute secured copy operations in TTCN-3. SCP provides secured file transfer in relying on the underlying SSH.

Features & Highlights

- Multiple test components and multiple-port mapping
- Freely combinable with additional test access (TTplugins)
